

# **SPECIFICATION**

**Graphic Type STN Dot Matrix LCD Module**

**JM10032A**

---

**• GENERAL SPECIFICATION**

100 X 32 dot display

New JRC LCD driver:NJU6450A

Interface with 8-bit MPU (directly connected to M6800 serial MPU)

**Display Specification**

Display dot: 100 X 32

Display type: STN and FSTN

Display color-Display background color: Yellow-Green,Blue-Gray, Black-White

Polarizer mode: Positive,Negative;Reflective ,Transflective,Transmissive

Viewing angle: 6:00 and 12:00

Display duty: 1/32

Driving bias: 1/7

Display RAM: 5120 bits

**Mechanical characteristics (Unit:mm)**

External dimension: 98.0 X 50.0 X 10.0 (15.0 for LED Backlight)

View area: 76.0 X 25.2

Dot size: 0.67 X 0.61

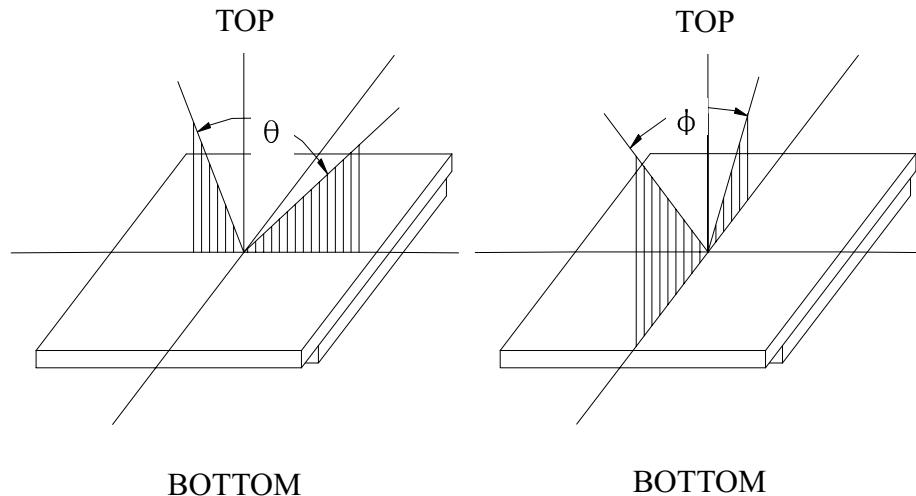

Dot pitch: 0.72 X 0.66

Weight: 86g (115g for LED backlight )

POWER: negative power, +5V power

## ● Optical Characteristics

### (1) Definition of viewing Angle

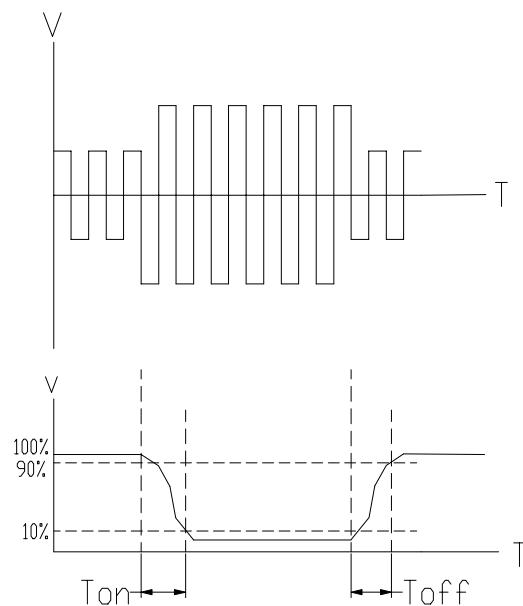

### (2) Definition of Contrast Ratio:

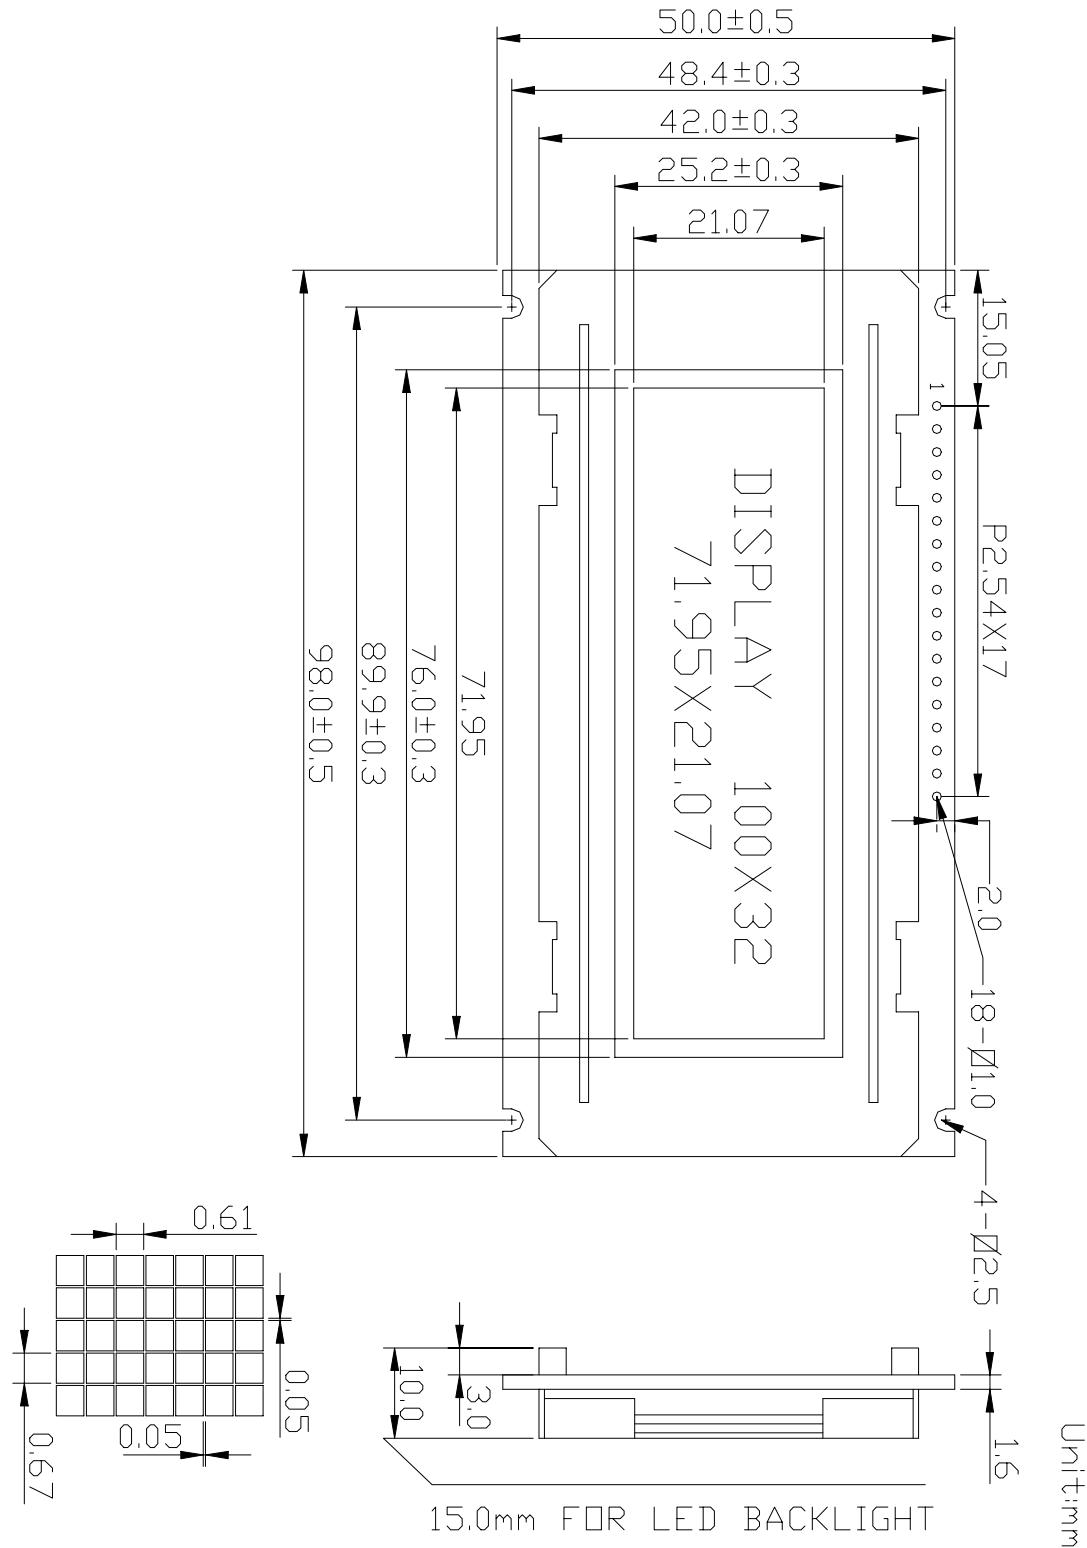

$$\text{Contrast Ratio} = \frac{\text{Reflectance value of non-selected state brightness}}{\text{Reflectance value of selected state brightness}}$$

Test condition : standard A light source

### (3) Response Time

Response time is measured as the shortest period of time possible between the change in state of an LCD segment as demonstrated below

**● External Dimension**

## ● Absolute Maximum Ratings

Item	Symbol	Condition	Standard Value		Unit
			Min	Max	
Supply Voltage for logic	Vdd	Ta=25°C	-0.3	7.0	V
Supply Voltage for LCD	Vee		Vdd-13.5	0	V
Input Voltage	Vr		-0.3	Vdd+0.3	V
Operating Temperature	Top	-	0	50	°C
Storage Temperature	Tstg	-	-20	70	°C

## ● Electrical Characteristics (Ta=25°C, Vdd= 5.0V)

Item	Symbol	Condition	Standard Value			Unit
			Min	Type	Max	
Supply Voltage for logic	Vdd-Vss	-	4.5	5.0	5.5	V
Supply Current for logic	Idd	Vdd=5.0	-	1.47	-	mA
Driving Current for LCD	Iee	Vee=-4.2	-	1.46	-	mA
Driving Voltage for LCD	Vdd-Vee	-	-	9.2	-	V
Input Voltage H level	V <sub>IH</sub>	H	0.8Vdd	-	Vdd	V
Input Voltage L level	V <sub>IL</sub>	L	Vss	-	0.8	V

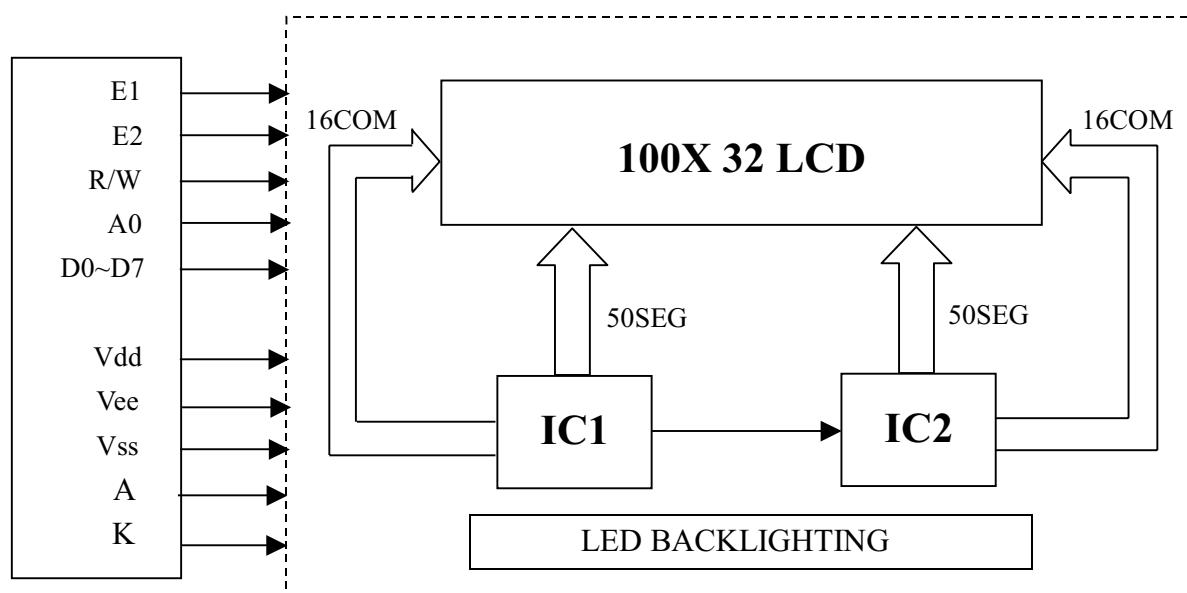

## ● Absolute Maximum Ratings For LED Backlight

PARAMETER	Symbol	Test condition	MIN.	TYP.	MAX.	UNIT
LED Forward Consumption Current	If	Ta=25°C Vf=4.1V	-	210	-	mA
LED Allowable Dissipation	Pd	-	-	880	-	mW

## ● Pin assignment

Pin NO.	Symbol	Function	Remark
1	Vss	Power supply	0V
2	Vdd		+5V
3	Vee		For LCD
4	A0	Register select H:data L:instruction	
5	R/W	read/write	
6	E1	IC1 enable	
7	E2	IC2 enable	
8	NC	No connection	
9	D0	Data bus bit 0	
10	D1	Data bus bit 1	
11	D2	Data bus bit 2	
12	D3	Data bus bit 3	
13	D4	Data bus bit 4	
14	D5	Data bus bit 5	
15	D6	Data bus bit 6	
16	D7	Data bus bit 7	
17	A	Anode of LED Unit	
18	K	Cathode of LED Unit	

## ● Block Diagram

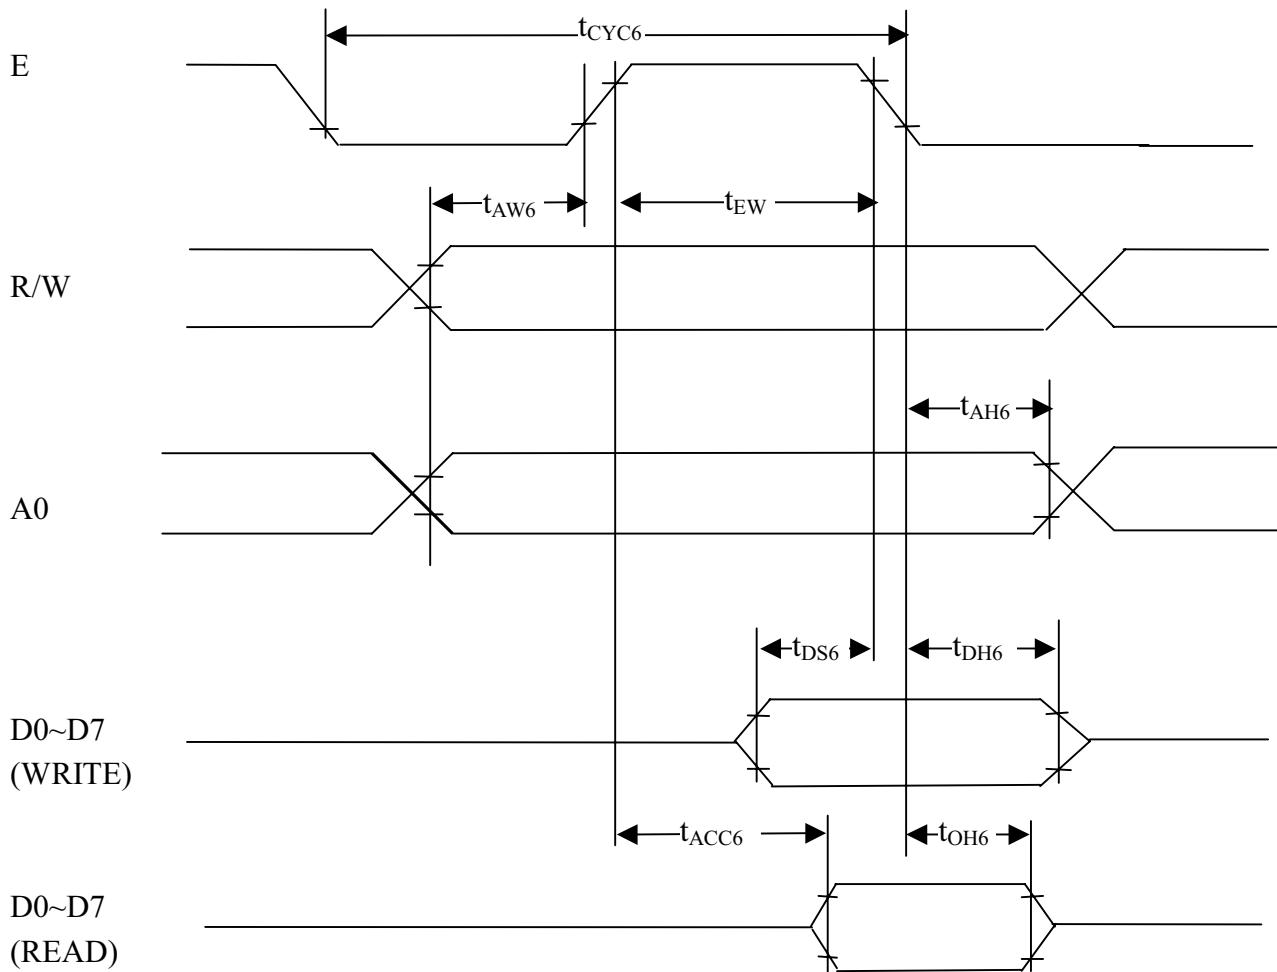

## ● MPU Interface

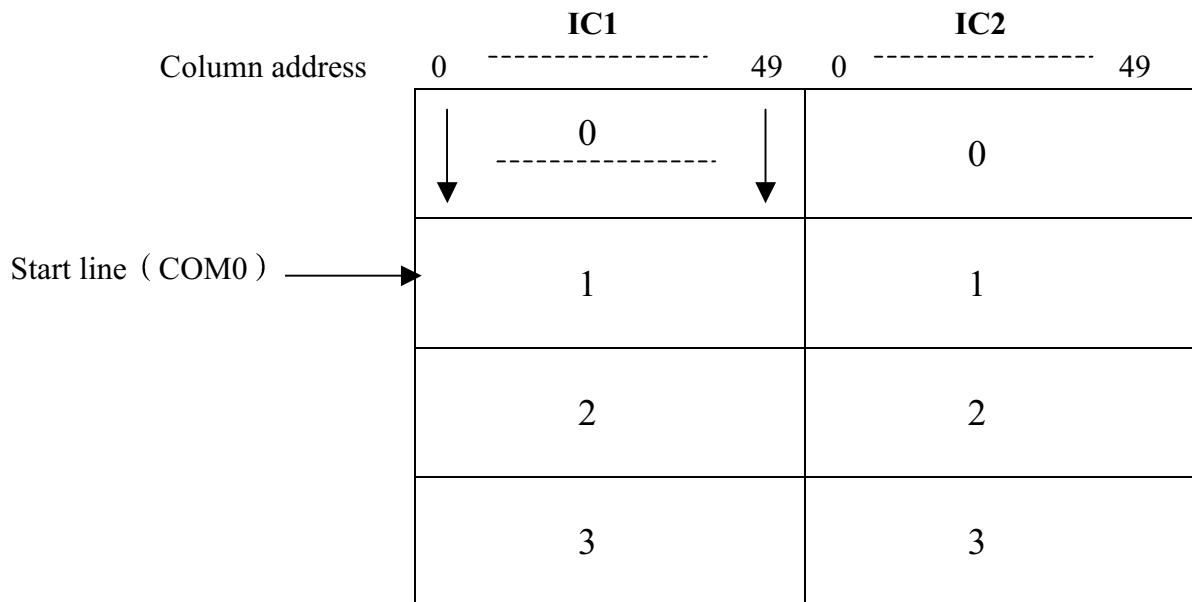

(  $V_{dd}=5.0V \pm 10\%$ ,  $V_{SS}=0V$ ,  $T_a=-20\sim+75^{\circ}C$  )

Parameter	Symbol	Min	Max	Condition	Unit
Address set up time	$t_{AW6}$	20			ns
Address hold time	$t_{AH6}$	10			ns
System cycle time	$t_{CYC6}$	1000			ns
E pulse width	$t_{EW}$	100			ns
		80			ns
Data set up time	$t_{DS6}$	80			ns
Data hold time	$t_{DH6}$	10			ns
Access time	$t_{ACC6}$		90	$C_L=100pF$	ns
Output disable time	$t_{OH6}$	10	60		ns

\*Input signal rise time and fall time are less than 15ns.

● Reflector of Screen and Display RAM

Correspondence with arrow direction and BIT:

→ D0 D1 D2 D3 D4 D5 D6 D7

Column address	A	D0=0	00	01	02	03	04	05	06	-----→		4F
	D	D0=1	4F	4E	4D	4C	4B	4A	49	←-----		00
SEG Term.		0	1	2	3	4	5	6	-----	60	-----	79

## ● Instruction code

Instruction	A0	R/W	D7	D6	D5	D4	D3	D2	D1	D0	Description
Display on/off	0	0	1	0	1	0	1	1	1	0/1	Whole disp on/off 1:on 0:off
Display start line	0	0	1	1	0	Display start address ( 1~31 )				Determine the disp line correspond to the COM0	
Page address set	0	0	1	0	1	1	1	0	Page ( 0~3 )		Set the page of disp data RAM
Column address set	0	0	0	Column address ( 0~79 )						Set the column address of disp data RAM	
Status read	0	1	B U S Y	A D C	O N / O F F	R E S E T	0	0	0	0	BUSY 0:ready 1:working ADC 0:counterclockwise 1:clockwise output ON/OFF 0:disp on 1:disp off RESET 0:normal 1:reset
Write display data	1	0	Write data						Written data to disp RAM	Access the predetermined address of the disp RAM	
Read display data	1	1	Read data						Read data from disp RAM		
ADC select	0	0	1	0	1	0	0	0	0	0/1	Determine the mode reading of the disp RAM 0:clockwise output 1:counterclockwise output
Static drive on/off	0	0	1	0	1	0	0	1	0	0/1	Select the dynamic or static driving 1:static driving 0:dynamic driving
Duty ratio select	0	0	1	0	1	0	1	0	0	0/1	Select the duty ratio 0: 1/16 1: 1/32
Read Modify write	0	0	1	1	1	0	0	0	0	0	Increment the column address register when writing but no change when reading
END	0	0	1	1	1	0	1	1	1	0	Release from the Read Modify Write mode
Reset	0	0	1	1	1	0	0	0	1	0	Set the display start line register to 1st line,page add. Register to 3
Power save (dual command)	0 0	0 0	1 1	0 0	1 1	0 0	1 0	1 1	1 0	0 1	Set the power save mode by selecting disp off and static driving on

## ● Instruction Description

### A. Display On/Off

This instruction executes whole display On/Off no relation with the data in the Display Data RAM and internal conditions.

	A0	R/W	D7	D6	D5	D4	D3	D2	D1	D0
Code	0	0	1	0	1	0	1	1	1	D

D      0: Display On  
1: Display Off

When the static driving mode is selected (static drive On) in display Off status, the internal circuits put on the power save mode.

### B. Display Start Line

This instruction set the line address. The selected line in the Display Data RAM correspond to the COM0 Which display at the top of LCD panel.

The display area is set automatically from the selected line to the line which increased the number of duty ratio.

Therefore, the smooth scroll for vertical direction by changing the start line address one by one or page switching are available by this instruction.

	A0	R/W	D7	D6	D5	D4	D3	D2	D1	D0
Code	0	0	1	1	0	A4	A3	A2	A1	A0

A4	A3	A2	A1	A0	Line Address
0	0	0	0	0	0
				1	1
1	1	1	1	0	1E
1	1	1	1	1	1F

### C. Page Address Set

When MPU access the display Data RAM, the page address corresponded to the row address must be selected.

The access in the display Data RAM is available by setting the page and column address.

The display is no change when the page address is changed.

	A0	R/W	D7	D6	D5	D4	D3	D2	D1	D0
Code	0	0	1	0	1	1	1	0	A1	A0

A1	A0	Page
0	0	0
0	1	1
1	0	2
1	1	3

### D. Column Address Set

This instruction set the column address in the Display Data RAM.

When the MPU access the Display Data RAM continuously, the column address increase "1" automatically, therefore, the MPU can access the data only without address setting.

The increment of the column address is stopped by the address of 50H automatically, but the page address is no change even if the column address increase to 50H and stop.

	A0	R/W	D7	D6	D5	D4	D3	D2	D1	D0
Code	0	0	0	A6	A5	A4	A3	A2	A1	A0

A6	A5	A4	A3	A2	A1	A0	Column Add.
0	0	0	0	0	0	0	0
0	0	0	0	0	0	1	1
1	0	0	1	1	1	0	4E
1	0	0	1	1	1	1	4F

## E. Status Read

This instruction read out the internal status.

	A0	R/W	D7	D6	D5	D4	D3	D2	D1	D0
Code	0	1	BUSY	ADC	ON/OFF	RESET	0	0	0	0

BUSY: BUSY=1 indicate the operating or the Reset cycle.

The instruction can be input after the BUSY status change to “0”.

ADC: Indicate the output correspondence of column(segment)address and segment driver.

0: Counter clockwise Output (Inverse)

Column Address 79-n       $\longleftrightarrow$       Segment Driver n

1: Clockwise Output (Normal)

Column Address n       $\longleftrightarrow$       Segment Driver n

ON/OFF: Indicate the whole display On/Off status.

0: Whole Display ”On”

1: Whole Display ”Off”

(Note) The data ”0=On” and “1=Off” of Display On/Off status read out is inverted with the Display On/Off instruction data of “1=On” and “0=Off”.

RESET: Indicate the initialization period by reset instruction.

0: \_\_\_\_\_

1: Initialization Period

## F. Write Display Data

This instruction write the 8-bit data on the data bus into the Display RAM.

The column (segment) address increase “1” automatically when writing, therefore, the MPU can write the 8-bit data into the Display Data RAM without address setting.

	A0	R/W	D7	D6	D5	D4	D3	D2	D1	D0
Code	1	0	Write Data							

## G. Read Display Data

This instruction read out the 8-bit data from Display Data RAM which addressed by the column and page address. In case of the Read Modify Write Mode is Off, the column address increase “1” automatically after each read out, therefore, the MPU can read out the 8-bit data from the Display Data RAM continuously without address setting.

	A0	R/W	D7	D6	D5	D4	D3	D2	D1	D0
Code	1	1	Read Data							

## H. ADC Select

This instruction set the correspondence of column address in the Display Data RAM and segment driver out. Therefore, the order of segment output can be changed by the software, and no restriction of the LSI placement against the LCD panel.

	A0	R/W	D7	D6	D5	D4	D3	D2	D1	D0
Code	0	0	1	0	1	0	0	0	0	D
D	0: Clockwise Output (Inverse)						1: Counter Clockwise Output (Normal)			

## I. Static Drive On/Off

This instruction executes the all common output terns on and whole display on obligatory.

	A0	R/W	D7	D6	D5	D4	D3	D2	D1	D0
Code	0	0	1	0	1	0	0	1	0	D
D	0: Static Drive Off (Normal Operation)						1: Static Drive On (Whole Display Turns On)			

When the Display Off mode is selected (Display Off) in Static Driver On status, the internal circuits put on the power save mode.

## J. Duty Select

This instruction set the LCD driving duty ratio.

	A0	R/W	D7	D6	D5	D4	D3	D2	D1	D0
Code	0	0	1	0	1	0	1	0	0	D

D    0: 1/16 duty  
      1: 1/32 duty

## K. Read Modify Write

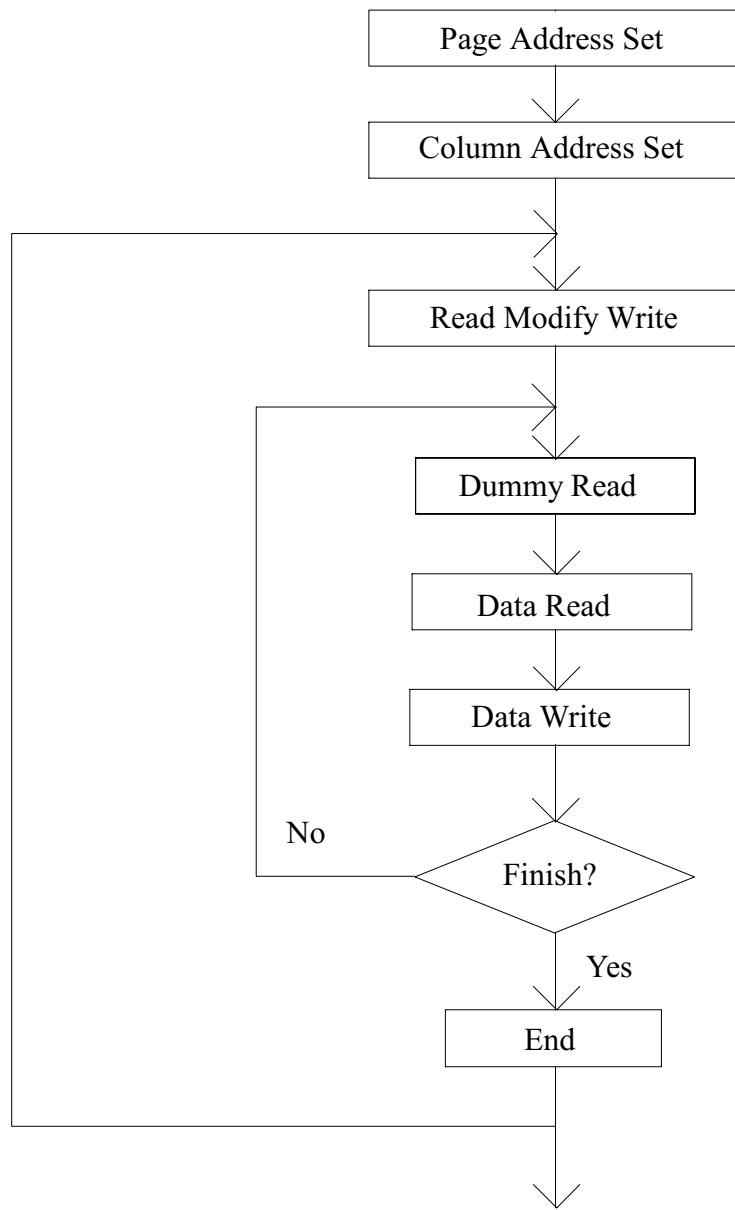

After this instruction is executed, the column address increase “1” automatically when Display Data Write Instruction execution, but the address is not changed when the Display Data Read Instruction execution.

This status continues during End instruction execution. When the End instruction is entered the column address back to the address where Read Modify Write instruction entering. By this function, the load of MPU for example cyclic data writing operation like as cursor blink etc., can be reduced.

	A0	R/W	D7	D6	D5	D4	D3	D2	D1	D0
Code	0	0	1	1	1	0	0	0	0	0

**(Note)** During the Read Modify Write mode, any instruction except Column Address Set can be executed.

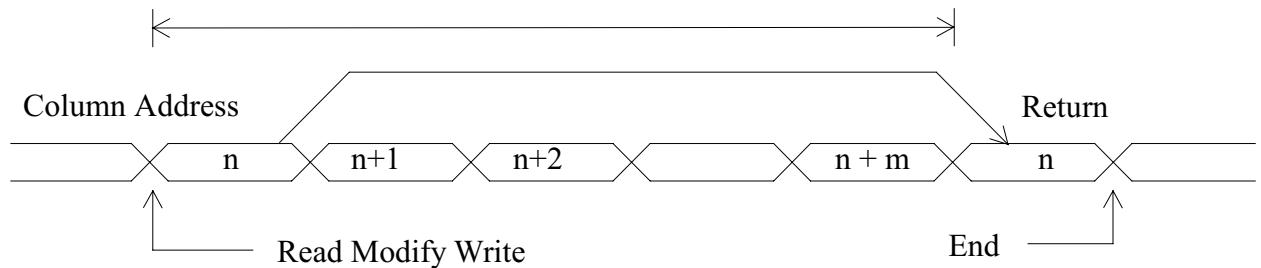

## L. Sequence of cursor display

## M. End

This instruction release the Read Modify Write mode and the column address back to the address where the Read Modify Write mode setting.

	A0	R/W	D7	D6	D5	D4	D3	D2	D1	D0
Code	0	0	1	1	1	0	1	1	1	0

## N. Reset

This instruction executes the following initialization.

Initialization

- 1) Set the first line in the Display Start Line Register.
- 2) Set the page 3 in the Page Register.

In this time, there are no influence to the Display Data RAM.

	A0	R/W	D7	D6	D5	D4	D3	D2	D1	D0
Code	0	0	1	1	1	0	0	0	1	0

(Note) The initialization when the power turns on can no be executed by Reset instruction.

## O. Power Save(Dual Command)

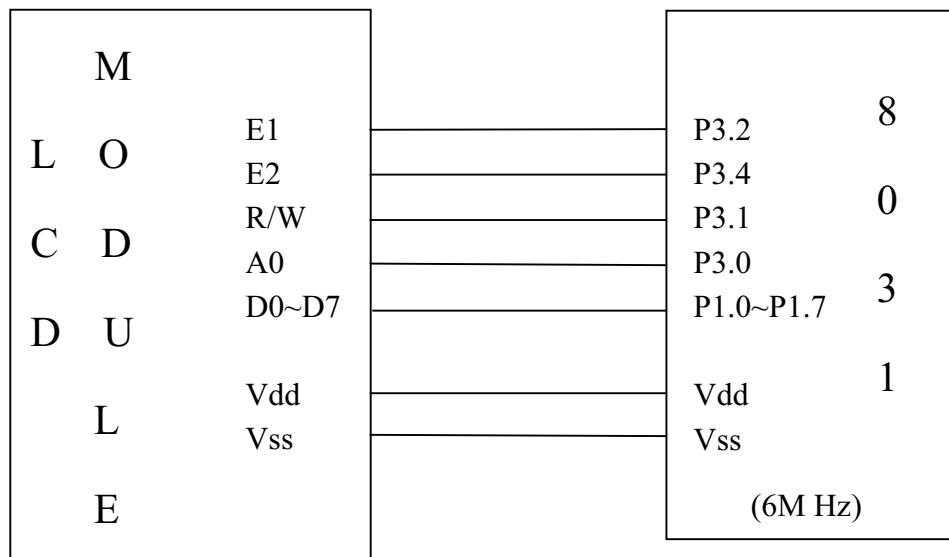

When both of Display Off and Static Drive On are executed, the internal put on the power save mode and the current consumption is reduced as same as stand by current. The internal status in this mode are as follows;

- 1) Stop the LCD driving. Segment and Common drivers output V<sub>dd</sub> level.
- 2) Stop the oscillation or inhibit the external clock input.
- 3) Keeping the display data and operating mode.

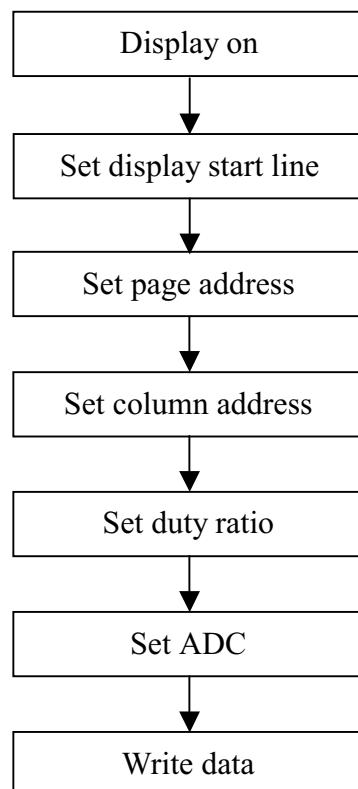

The power save mode is released by Display on or static drive off instruction.

## ● Application Example
