

SPECIFICATION

Graphic Type STN Dot Matrix LCD Module

JM32064A

GENERAL SPECIFICATION

320 X 64 dot display

Toshiba LCD controller: T6963C

Toshiba LCD driver: T6A39 and T6A40

Interface with 8-bit MPU (directly connected to Z80 serial MPU)

Display Specification

Display Mode: graphic, text and combination text-graphic mode

Display Dot: 320 X 64

Display type: STN and FSTN

Display color-Display background color: Black-Yellow Green; Blue-Gray; Black-White

Polarizer mode: Positive,Negative; Reflective , Transflective,Transmissive

Viewing angle: 6:00 and 12:00

Display duty: 1/64

Driving bias: 1/9

Selectable character font: 6 X 8 or 8 X 8

Memory and External Memory:

A standard 128-word character generator ROM

8KB or 32KB external display RAM (static RAM)

Mechanical characteristics (Unit:mm)

Extenal dimension: 200.0 X 45.2 X 9.4 (13.6 for Bottom LED Backlight)

View area: 167.0 X 35.0

Dot size: 0.44 X 0.44

Dot pitch: 0.49 X 0.49

Weight: 108g (147g for Bottom LED Backlight)

POWER: negative power, +5V power

● **Optical Characteristics**

(1) Definition of viewing Angle

(2) Definition of Contrast Ratio:

$$\text{Contrast Ratio} = \frac{\text{Reflectance value of non-selected state brightness}}{\text{Reflectance value of selected state brightness}}$$

Test condition : standard A light source

(3) Response Time

Response time is measured as the shortest period of time possible between the change in state of an LCD segment as demonstrated below

● Absolute Maximum Ratings For Bottom LED Backlight

Parameter	Symbol	Test condition	Min	Type	Max	Unit
LED Forward Consumption Current	I_f	Ta=25°C Vf=4.1V	-	500	-	mA
LED Allowable Dissipation	P_d		-	2100	-	mW

● Absolute Maximum Ratings

Item	Symbol	Condition	Standard Value		Unit
			Min	Max	
Supply Voltage for logic	Vdd	Ta=25°C	-0.3	7.0	V
Supply Voltage for LCD	Vee		Vdd-30.0	Vdd+0.3	V
Input Voltage	Vi		-0.3	Vdd+0.3	V
Operating Temp(T)	Top	-	0	50	°C
Storage Temp(T)	Tstg	-	-20	70	°C
Operating Temp(HT)	HTop	-	-20	70	°C
Storage Temp(HT)	HTstg	-	-30	80	°C
Operating Temp(EHT)	EHTop	-	-30	80	°C
Storage Temp(EHT)	EHTstg	-	-40	80	°C

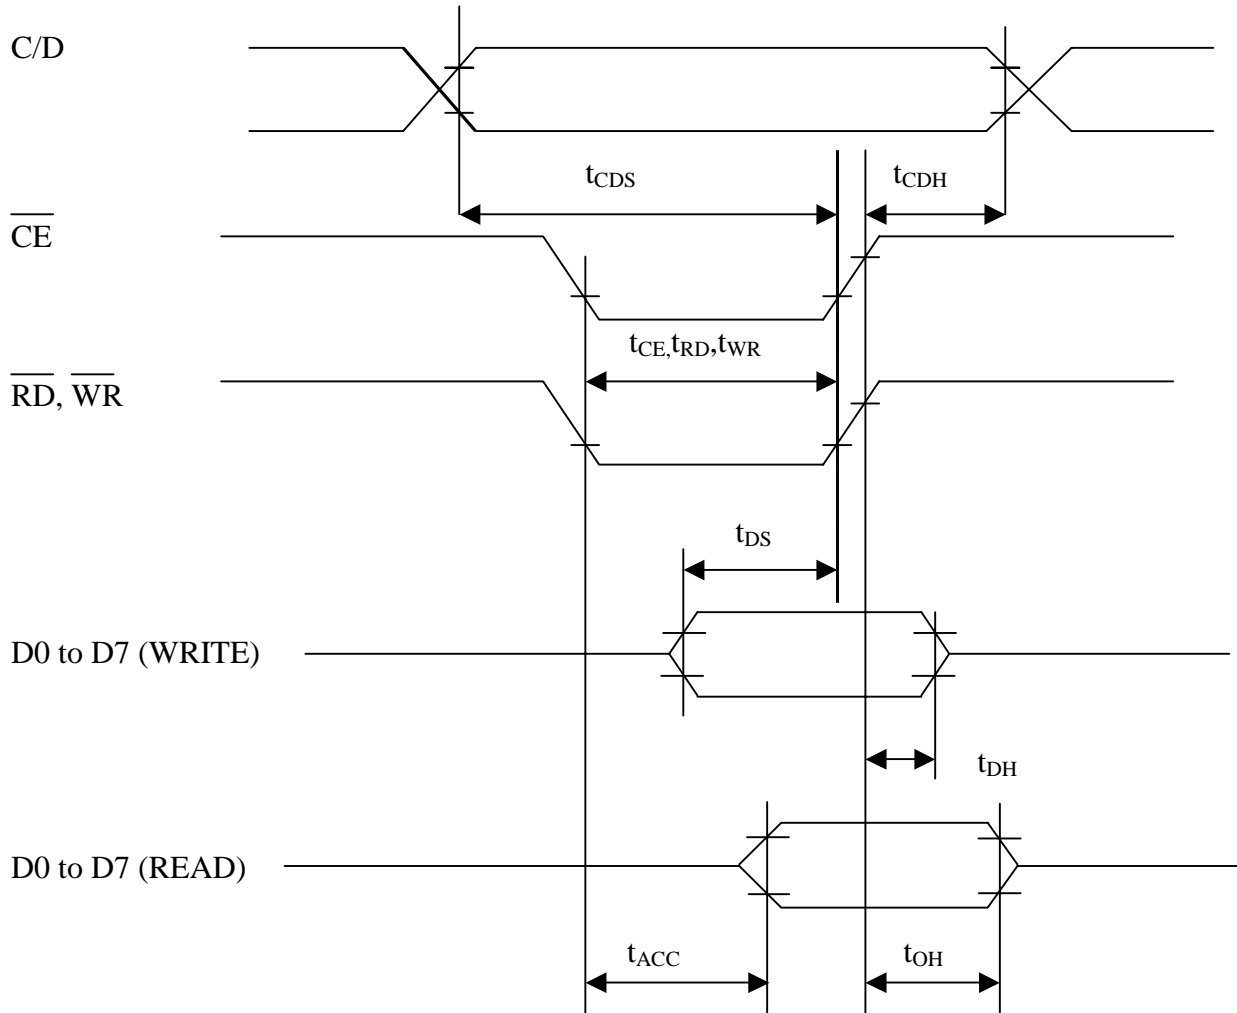

● Electrical Characteristics (Ta=25°C, Vdd= 5.0V)

Item	Symbol	Condition	Standard Value			Unit
			min	Type	max	
Supply Voltage for logic	Vdd-Vss	-	4.5	5.0	5.5	V
Supply Current for logic	Idd	Vdd= 5.0	-	14.7	-	mA
Driving Current for LCD	Iee	Vee= -7.8	-	2.7	-	mA
Driving Voltage for LCD	Vdd-Vee	25°C	-	12.8	-	V
Input Voltage "H" level	V _{IH}	H	Vdd-2.2	-	Vdd	V
Input Voltage "L" level	V _{IL}	L	0	-	0.8	V

● Block Diagram

● Bus Timing

TEST CONDITIONS (Unless otherwise noted, $V_{DD}=5.0V \pm 10\%$, $V_{SS}=0V$, $T_a=-20$ to $75^\circ C$)

ITEM	SYMBOL	MIN	MAX	UNIT
C/D Set-up Time	t_{CDS}	100	-	ns
C/D Hold Time	t_{CDH}	10	-	ns
$\overline{CE}, \overline{RD}, \overline{WR}$ Pulse Width	t_{CE}, t_{RD}, t_{WR}	80	-	ns
Data Set-up Time	t_{DS}	80	-	ns
Data Hold Time	t_{DH}	40	-	ns
Access Time	t_{ACC}	-	150	ns
Output Hold Time	t_{OH}	10	50	ns

● Pin assignment

Pin NO.	Symbol	Function	Remark
1	FG	Module Frame Ground	
2	V _{ss}	Power Supply	0V
3	V _{dd}		+5V
4	V _{ee}		For LCD
5	$\overline{\text{WR}}$	Data Write	
6	$\overline{\text{RD}}$	Data Read	
7	$\overline{\text{CE}}$	Chip Enable	
8	C/D	Command/Data Select	
9	NC	No connection	
10	$\overline{\text{RST}}$	Reset Signal	
11	DB0	Data Bit 0	
12	DB1	Data Bit 1	
13	DB2	Data Bit 2	
14	DB3	Data Bit 3	
15	DB4	Data Bit 4	
16	DB5	Data Bit 5	
17	DB6	Data Bit 6	
18	DB7	Data Bit 7	
19	FS	Font Selection	
20	NC	No connection	
21	A	Anode of LED Unit	
22	K	Cathode of LED Unit	

● Flowchart of communications with MPU

Status Word

MSB							LSB
STA7	STA6	STA5	STA4	STA3	STA2	STA1	STA0
D7	D6	D5	D4	D3	D2	D1	D0

STA0	Check command execution capability	0:Disable 1:Enable
STA1	Check data read/write capability	0:Disable 1:Enable
STA2	Check Auto mode data read capability	0:Disable 1:Enable
STA3	Check Auto mode data write capability	0:Disable 1:Enable
STA4	Not used	
STA5	Check controller operation capability	0:Disable 1:Enable
STA6	Error flag. Used for Screen Peek and Screen copy commands	0:No error 1:Error
STA7	Check the blink condition	0:Display off 1:Normal display

Note1: A status check must be performed before data is read or written.

Note2: It is necessary to check STA0 and STA1 at the same time.

There is a possibility of erroneous operation due to a hardware interrupt.

Note3: For most modes STA0/STA1 are used as a status check.

Note4: STA2 and STA3 are valid in Auto mode; STA0 and STA1 are invalid.

Setting Data

a) The case of 1 data

b) The case of 2 data

● COMMAND DEFINITIONS

COMMAND	CODE	D1	D2	FUNCTION
REGISTERS SETTING	00100001	X address	Y address	Set Cursor Pointer

	1111X111	—	—	Bit 7 (MSB)

Note: First set the data, then set the command.

● Description of Command

Setting Registers

(1) Set Cursor Pointer

The position of the cursor is specified by X ADRS and Y ADRS. The cursor position can only be moved by this command. Data read/write from the MPU never changes the cursor pointer.

X ADRS: 00H to 4FH(lower 7 bits are valid); Y ADRS: 00H to 1FH(lower 5 bits are valid)

a) Single-Scan

X ADRS 00 to 4FH

Y ADRS 00H to 0FH

b) Dual-Scan

X ADRS 00H to 4FH

Y ADRS 00H to 0FH
Upper screen

Y ADRS 10H to 1FH
Lower screen

(2) Set Offset Register

The offset register is used to determine the external character generator RAM area.

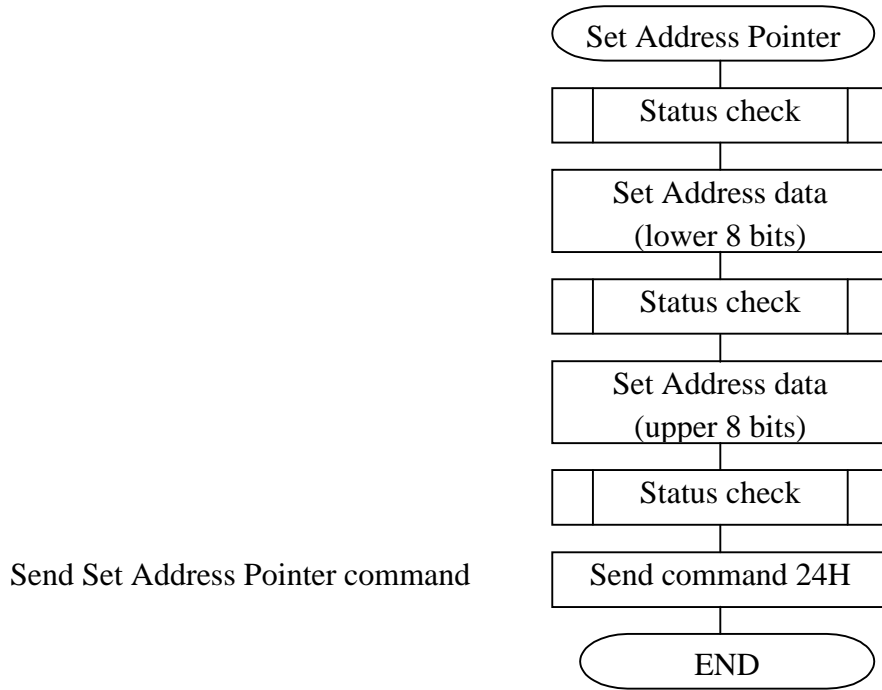

The senior five bits define the start address in external memory of the CG RAM area. The next eight bits represent the character code of the character. In internal CG ROM mode, character codes 00H to 7FH represent the predefined “internal” CG ROM characters, and codes 80H to FFH represent the user’s own “external” characters. In external CG RAM mode, all 256 codes from 00H to FFH can be used to represent the user’s own characters.

The three least significant bits indicate one of the eight rows of eight dots that define the character’s shape.

The relationship between display RAM address and offset register

Offset register data	CG RAM hex. Address (start to end)
00000	0000 to 07FFH
00001	0800 to 0FFFH
00010	1000 to 17FFH
11100	E000 to E7FFH
11101	E800 to EFFFH
11110	F000 to F7FFH
11111	F800 to FFFFH

Set Control Word

The home address and column size are defined by this command.

(1) Set Text Home Address

The starting address in the external display RAM for text display is defined by this command. The text home address indicates the leftmost and uppermost position.

The relationship between external display RAM address and display position.

TH	-----	TH+CL
TH+TA	-----	TH+TA+CL
(TH+TA)+TA	-----	TH+2TA+CL
-----	-----	-----
TH+(N-1)TA	-----	TH+(N-1)TA+CL

TH: Text home address TA: Text area number (columns)

CL: Columns are fixed by hardware (pin-programmable).

Example:

Text home address: 0000H Text area: 0020H

MD2=H, MD3=H: 32 columns DUAL=H, MDS=L, MD0=L, MD1=H: 4lines

0000H	0001H	-----	001EH	001FH
0020H	0021H	-----	003EH	003FH
0040H	0041H	-----	005EH	005FH
0060H	0061H	-----	007EH	007FH

(2) Set Graphic Home Address

The starting address of the external display RAM used for graphic display is defined by this command. The graphic home address indicates the leftmost and uppermost position. The relationship between external display RAM address and display position

GH	-----	GH+CL
GH+GA	-----	GH+GA+CL
(GH+GA)+GA	-----	GH+2GA+CL
-----	-----	-----
GH+(N-1)GA	-----	GH+(N-1)GA+CL

GH: Graphic home address GA: Graphic area number (columns)

CL: Columns are fixed by hardware (pin-programmable).

Example:

Graphic home address: 0000H

Graphic area: 0020H

MD2=H, MD3=H: 32 columns

DUAL=H, MDS=L, MD0=H, MD1=H: 2lines

0000H	0001H	-----	001EH	001FH
0020H	0021H	-----	003EH	003FH
0040H	0041H	-----	005EH	005FH
0060H	0061H	-----	007EH	007FH
0080H	0081H	-----	009EH	009FH
00A0H	00A1H	-----	00BEH	00BFH
00C0H	00C1H	-----	00DEH	00DFH
00E0H	00E1H	-----	00FEH	00FFH
0100H	0101H	-----	011EH	011FH
0120H	0121H	-----	013EH	013FH
0140H	0141H	-----	015EH	015FH
0160H	0161H	-----	017EH	017FH
0180H	0181H	-----	019EH	019FH
01A0H	01A1H	-----	01BEH	01BFH
01C0H	01C1H	-----	01DEH	01DFH
01E0H	01E1H	-----	01FEH	01FFH

(3) Set Text Area

This command can be used to define the columns of the test display.

Example:

LCD size: 20 columns, 4lines

Text home address: 0000H

Text area: 0014H

MD2=H, MD3=H: 32 columns

DUAL=H, MDS=L, MD0=L, MD1=H: 4lines

0000	0001	-----	0013	0014	-----	001F
0014	0015	-----	0027	0028	-----	0033
0028	0029	-----	003B	003C	-----	0047
003C	003D	-----	004F	0050	-----	005B

(4) Set Graphic Area

This command can be used define the columns of the graphic display.

Example: LCD size: 20 columns, 2lines Graphic home address: 0000H
 Graphic area: 0014H MD2=H, MD3=H: 0014H
 DUAL=L, MDS=L, MD0=H, MD1=H: 2lines

0000	0001	-----	0013	0014	-----	001F
0014	0015	-----	0027	0028	-----	0033
0028	0029	-----	003B	003C	-----	0047
003C	003D	-----	004F	0050	-----	005B
0050	0051	-----	0063	0064	-----	006F
0064	0065	-----	0077	0078	-----	0083
0078	0079	-----	008B	008C	-----	0097
008C	008D	-----	009F	00A0	-----	00AB
00A0	00A1	-----	00B3	00B4	-----	00BF
00B4	00B5	-----	00C7	00C8	-----	00D3
00C8	00C9	-----	00DB	00DC	-----	00E7
00DC	00DD	-----	00EF	00F0	-----	00FD
00F0	00F1	-----	0103	0104	-----	011F
0104	0105	-----	0127	0128	-----	0123
0128	0129	-----	013B	013C	-----	0147
013C	013D	-----	014F	0150	-----	015B

Mode Set

The display mode does not change until the next command is sent. In Internal Character Generator mode, character codes 00H to 7FH are assigned to the built-in character generator RAM. The character codes 80H to FFH are automatically assigned to the external character generator RAM.

Example: (Note: Attribute functions can only be applied to text display, since the attribute data is placed in the graphic RAM area.)

GRAPHIC

TEXT

“ OR ”

“ AND ”

“ EXOR ”

Attribute Function

The attribute operations are Reverse display, Character blink and inhibit. The attribute data is written into the graphic area which was defined by the Set Control Word command. Only text display is possible in Attribute function mode; graphic display is automatically disabled. However, the Display Mode command must be used to turn both Text and Graphic on in order for the Attribute function to be available.

Attribute RAM 1byte

X	X	X	X	d3	d2	d1	d0
---	---	---	---	----	----	----	----

d3	d2	d1	d0	FUNCTION
0	0	0	0	Normal display
0	1	0	1	Reverse display
0	0	1	1	Inhibit display
1	0	0	0	Blink of normal display
1	1	0	1	Blink of reverse display
1	0	1	1	Blink of inhibit of display

X: invalid

Display Mode

It is necessary to turn on “Text display” and “Graphic display” in the following cases.

- a) Combination of text/graphic display
- b) Attribute function

Cursor Pattern Select

When cursor display is ON, this command selects the cursor pattern in the range 1 line to 8lines. The cursor address is defined by the Cursor Pointer Set command.

1-line cursor

2-line cursor

8-line cursor

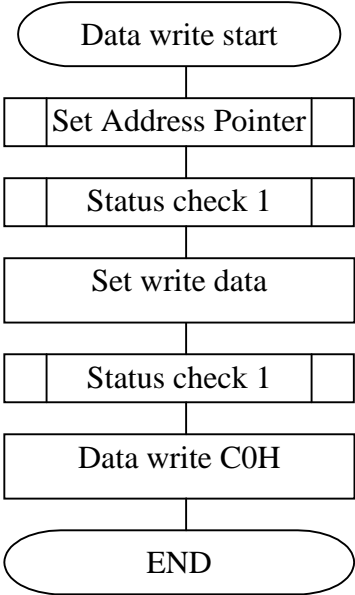

Data Auto Read/Write

This command is convenient for sending a full screen of data from the external display RAM. After setting Auto mode, a Data Write (or Read) command is need not be sent between each datum. A Data Auto Write (or Read) command must be sent after a Set Address Pointer command. After this command, the address pointer is automatically incremented by 1 after each datum. In Auto mode, the LCM cannot accept any other commands. The Auto Rest command must be sent to the LCM after all data has been sent, to clear Auto mode.

Data Read/Write

This command is used for writing data from the MPU to external display RAM, and reading data from external display RAM to the MPU. Data Write/Read should be executed after setting address using Set Address Pointer command. The address pointer can be automatically incremented or decrement using this command.

Note : This command is necessary for each 1-byte datum.
Refer to the following flowchart

Screen Peek

The command is used to transfer 1 byte of displayed data to the data stack ; this byte can then be read from the MPU by data access. The logical combination of text and graphic display data on the LCD screen can be read by this command.

The status (STA6) should be checked just after the Screen Peek command. If the address determined by the Set Address Pointer command is not in the graphic area, this command is ignored and a status flag (STA6) is set.

Refer to the following flowchart

Note: This command is available when hardware column number and software column number are the same. Hardware column number is related to MD2 and MD3 setting.

Software column number is related to Set Text Area and Set Graphic Area command.

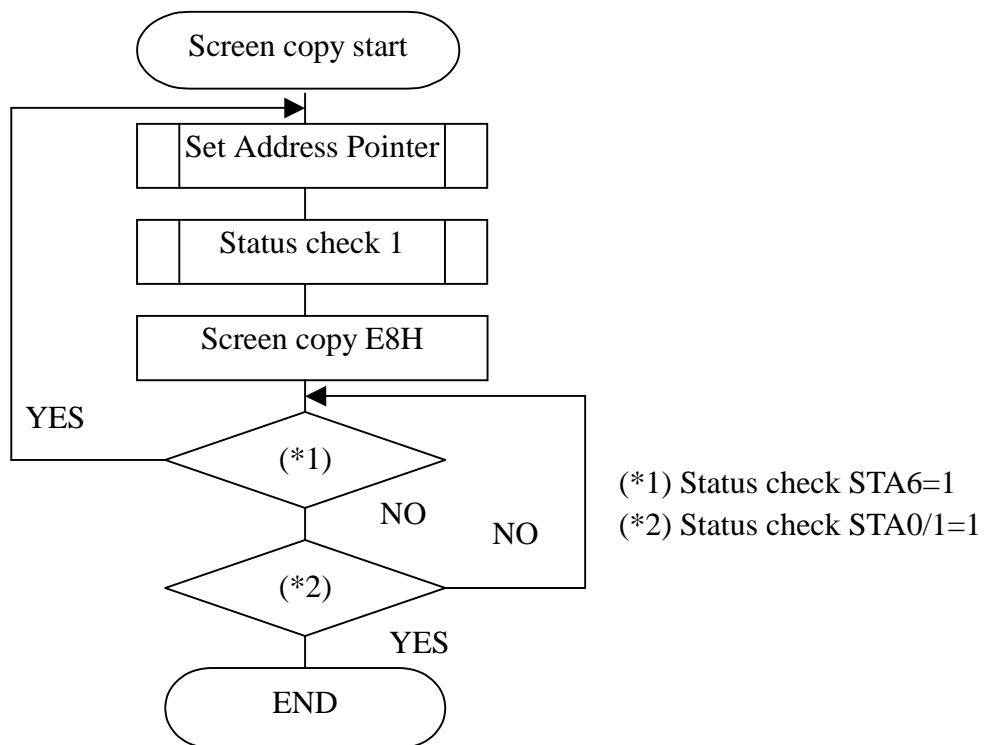

(Note) This command is available when hardware column number and software column number are the same. Hardware column number is related to MD2 and MD3 setting. Software column number is related to Set Text Area and Set Graphic Area command.

Screen Copy

This command copies a single raster line of data to the graphic area. The start point must be set using the Set Address Pointer command.

Refer to the following flowchart :

Note1: If the attribute function is being used, this command is not available.(With Attribute data is graphic area data)

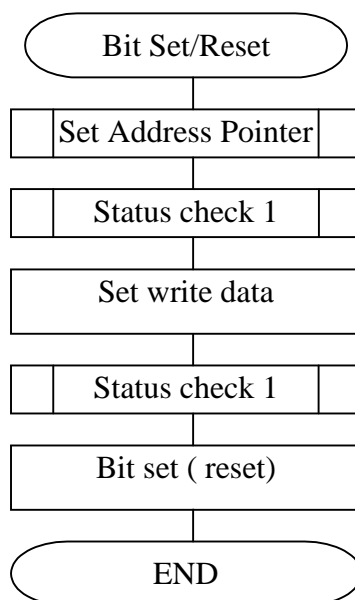

Note2: With Dual-Scan, this command cannot be used (because the LCM cannot separate the upper screen data and lower screen data).

Note3: This command is available when hardware column number and software column number are the same.

Bit Set/Reset

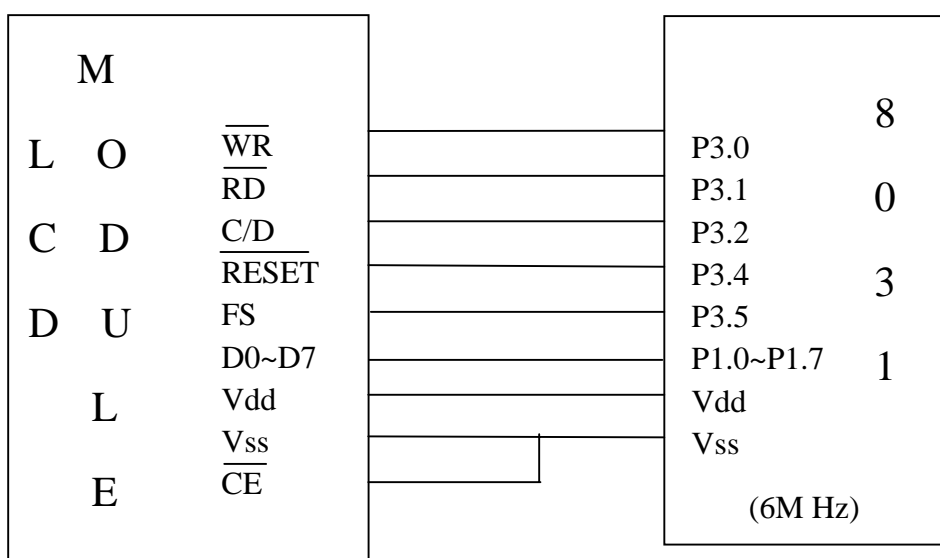

This command use to set or reset a bit of the byte specified by the address pointer. Only one bit can be set/rest at a time.

Refer to the following flowchart:
